

INDIANA UNIVERSITY

BLOOMINGTON, INDIANA 47405

23 November, 1964

Dear Sir:

Epilepsy is a puzzling disease to many people. It is of the utmost importance that every person in the medical field have an overall perspective of the various types of seizures. For this reason, the Indiana University Audio-Visual Center has developed a 25 minute film using actual patients to show the various types of seizures. This film, EPILEPTIC SEIZURE PATTERNS, was made in cooperation with the Indiana University Medical Center. In addition to the seizure patterns, the brain waves of the patients are also shown.

If you would be interested in previewing the film, please return the enclosed preview card and a copy will be made available at no charge.

Sincerely,

Robert R. Pictor  
Audio-Visual Center
